

Cloud Calling for Education

Four ways to achieve continuous collaboration in education

When it comes to virtual and hybrid learning, Cloud Calling for Education helps **public and private schools, colleges, and universities** to take advantage of all learning opportunities.

1

Integrated Collaboration

In a single place, education administrators, staff, and families can seamlessly communicate with direct access to meetings, messaging and contact information.

2

Embedded Security

Maintain a secure educational environment with adherence to FCC Enhanced 911 (E911), including Kari's Law, which enables direct dialing of 911 from any phone, and Ray Baum's Act, which requires that all 911 calls include an accurate location.

3

Exceptional Performance

Get the latest cloud calling technology powered by the same enterprise-class products and software that Cisco has always provided.

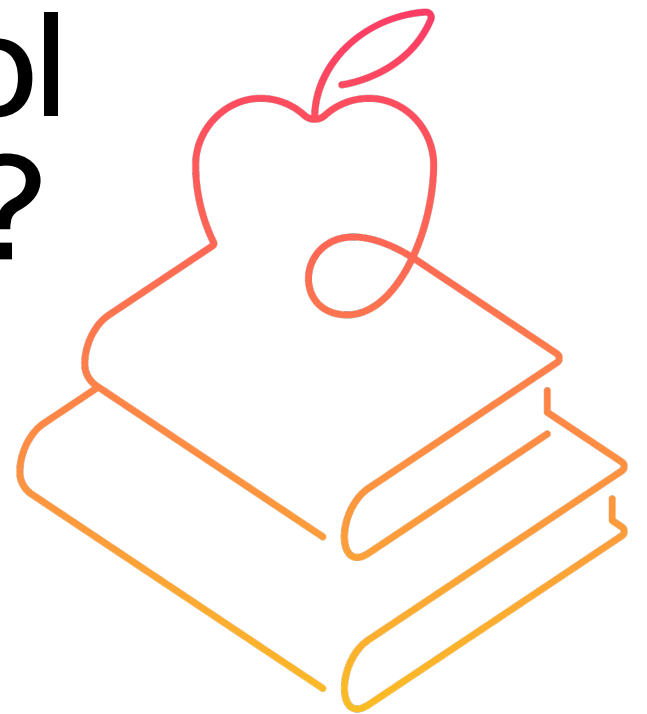

4

Practical Cost

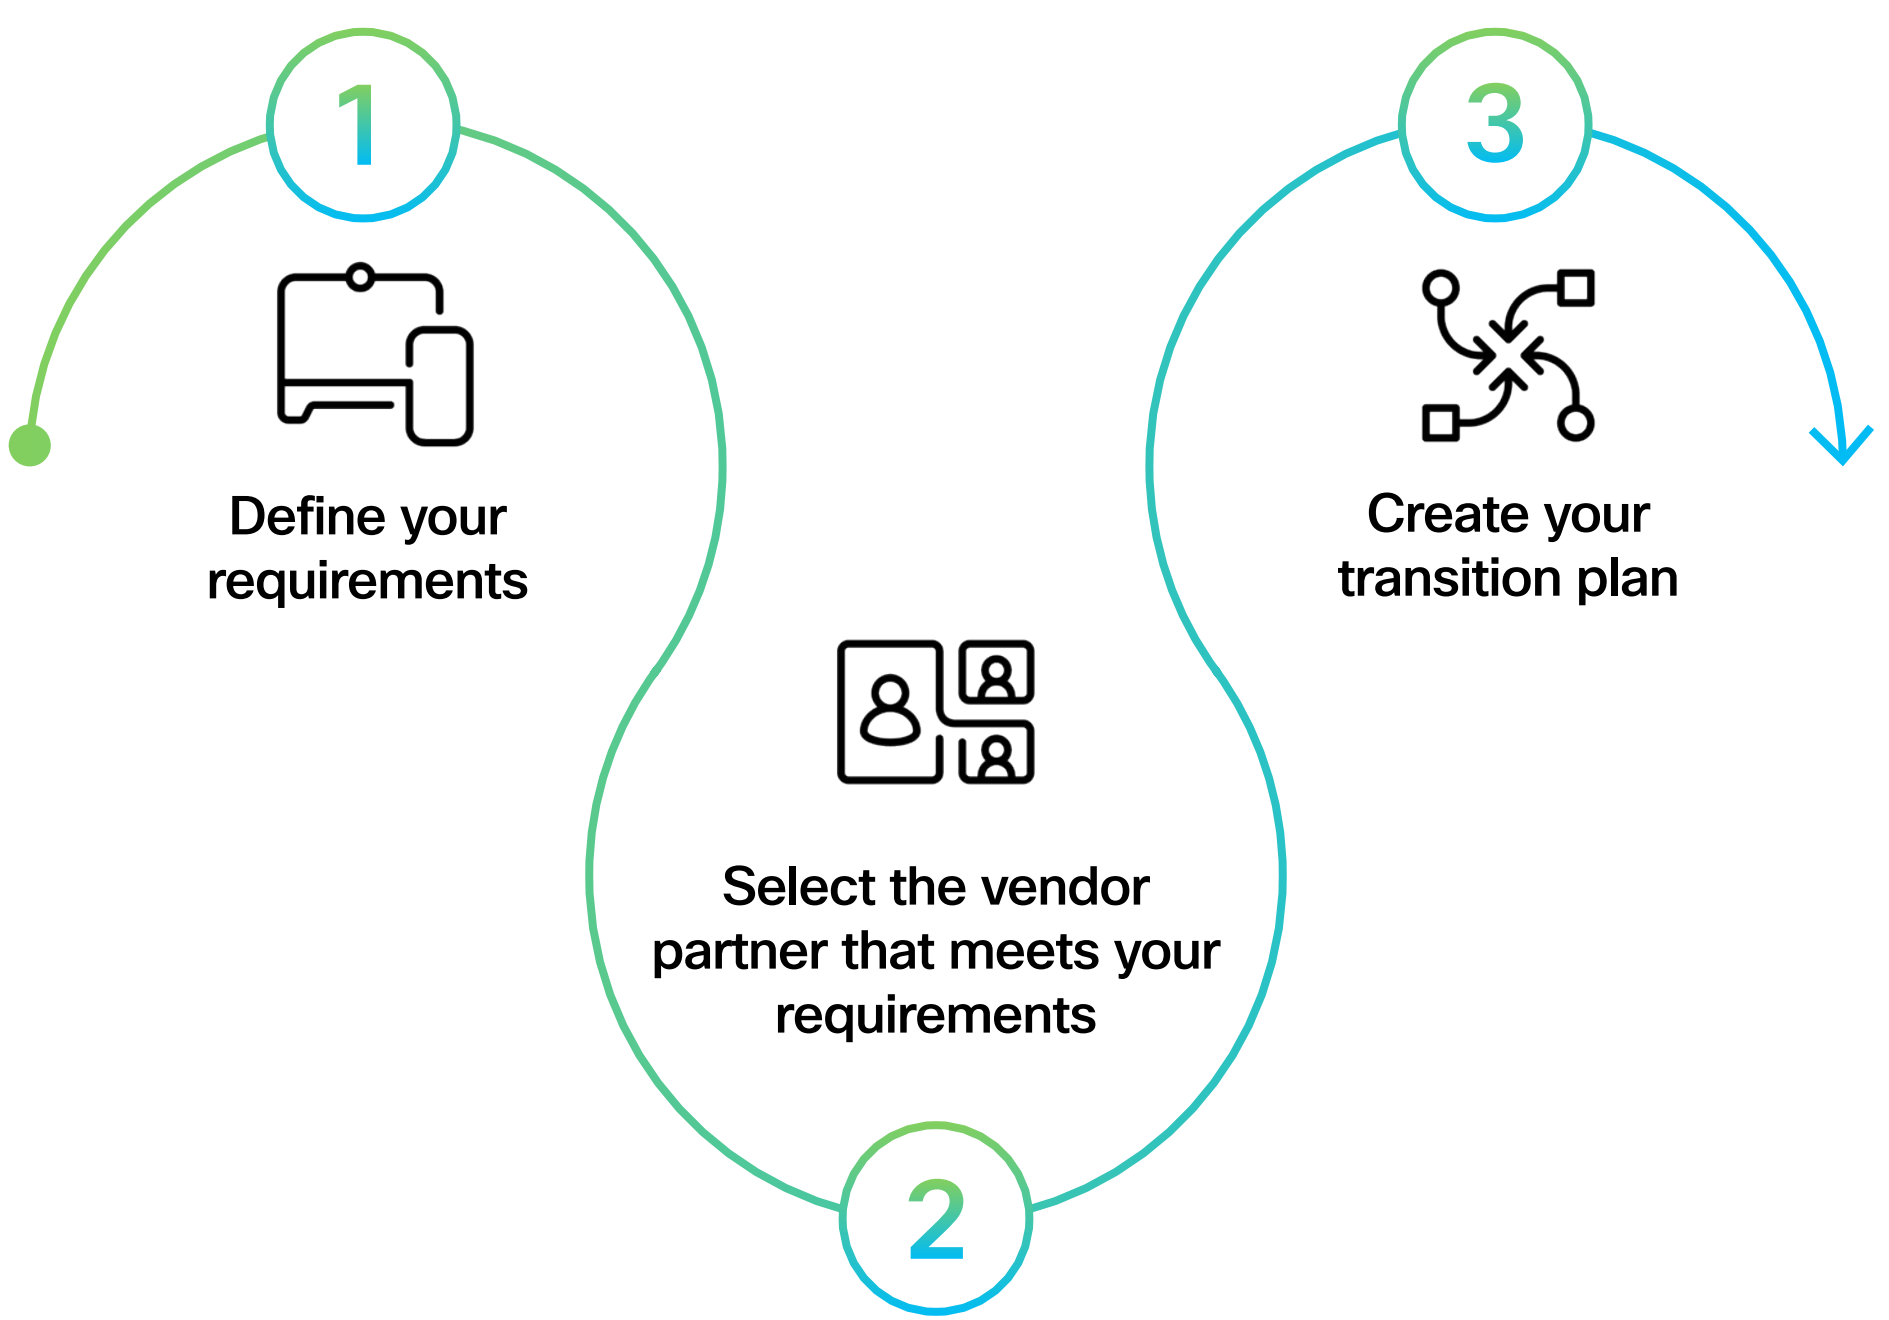

As a world-class cloud service provider, Cisco will enable your school to reduce operational costs (both physical and maintenance costs), while simplifying your administrative tasks around configuration and deployment of advanced features like E911.

How can my school district get started?

Your schools' transition to cloud calling starts with preparation. Reduce any burden on staff, ensuring continuous communication is available for teachers to speak with families in the district.

Take the next three steps:
